DETAILED ACTION

Claims 1-15 are generic to a plurality of disclosed patentably distinct species comprising a method for measuring competitive binding activity of molecules to nuclear receptors wherein the receptors are PPAR, SXR, FXR, LXR, RXR, RAR, TR, ER, PR, GR, MR, AR and ERR. The methods using each of these receptors are independent and distinct, each from the other, because these receptors possess characteristic differences in structure and function, and each has an independent utility, that is distinct for each receptor which cannot be exchanged. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1646

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
